

Refrigerant Pricing Update

28th September 2026

Dear customers,

We are writing to advise that we are anticipating monthly refrigerant price changes throughout 2026 and 2027. The prices will be updated on the 1st of each month with immediate effect.

We are encouraging all customers to explore the use of lower GWP refrigerants and natural refrigerants available from Beijer Ref Australia.

It is now more important than ever to consider moving away from refrigerants with a GWP of greater than 1500. We would recommend considering asset replacement wherever a situation arises and there is a need to repair systems and need for full recharge of refrigerants of this type.

Common HFC Refrigerants with a GWP > than 1500 include but are not limited to:
R404A, R507, R410A, R407C, R4507F, R438A, R422D

R452A has limited availability and is not recommended as a Refrigerant for stationery Refrigeration applications.

As prices are updated, customers can review this in the Beijer Ref [REFSHOP](#) or via calling your local representative.

We thank you for your continued business and support and trust that this advanced notice helps you plan for your long-term project needs.

Best regards,

The team at Beijer Ref Australia
