

PVC and Insulation Price Update April 2026

29 April 2026

Dear customers,

Per our communication earlier in the month, we have continued to see volatility in global raw material markets — particularly sustained increases in petrochemical, oil and rubber-based products.

As a result, effective 1 May 2026, pricing for PVC pipe and K-Flex insulation products will increase by approximately 24%–26%. Our team can work with you on supply for critical projects and we encourage you to plan ahead with quotations for your project needs.

We thank you for your continued business and support.

Best regards,

The team at Beijer Ref Australia
